An Automatic Sprinkler System is No Better than the Supervision it Receives

HOW **ADT**

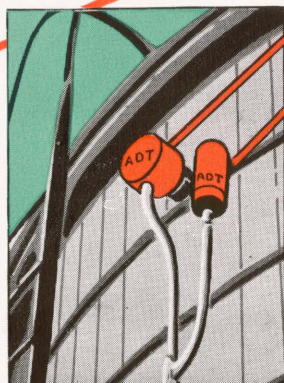

SUPERVISES AUTOMATIC SPRINKLER SYSTEMS

1

2

3

1 If the water in a pressure tank goes below a certain level or the air pressure drops below the required minimum—a signal is transmitted to the A. D. T. Central Station.

2 If the post indicator valve on the outside of the building is closed—a signal is transmitted to the A. D. T. Central Station.

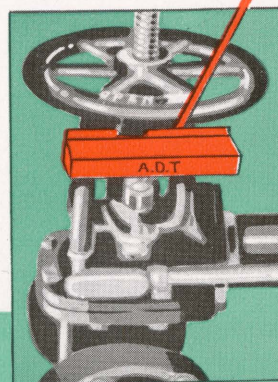

3 If the water level in a tank on top of a building falls too low or if the water becomes too cold in winter—a signal is transmitted to the A. D. T. Central Station.

4 If any valve that cuts off the supply of water is closed for any reason—a signal is transmitted to the A. D. T. Central Station.

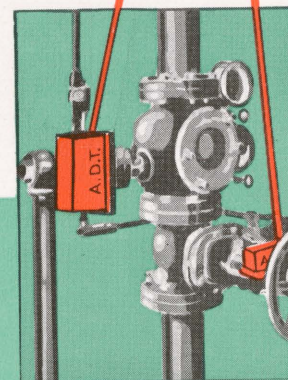

5 The instant water starts to flow through the main valves of the system—a fire alarm is sent to the A. D. T. Central Station which immediately notifies the fire department.

A. D. T. CENTRAL STATION

4

5

A. D. T. watches your sprinkler system electrically, 24 hours a day, to guard against failure to operate when needed. The fire department is notified the instant a sprinkler head goes off and A. D. T. guards are dispatched to safeguard your interests.

You can't expect the police to guard your particular premises all night long

HOW **ADT**

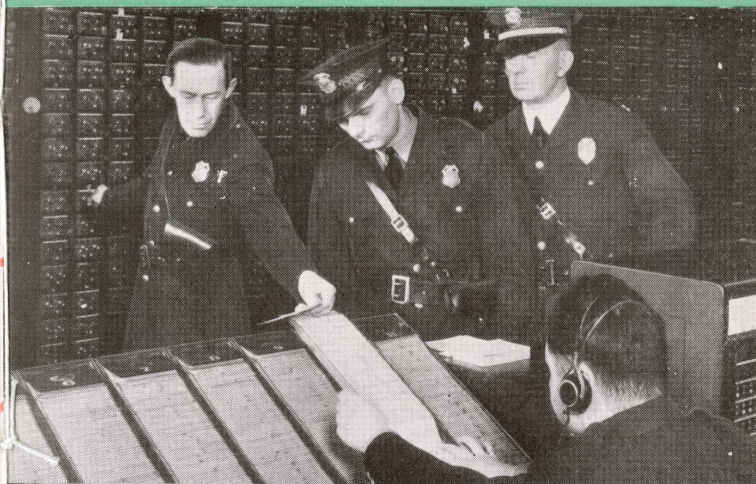

If any attempt is made to burglarize a safe; to force open or to smash a window; to pry open a door; to break through a partition wall or if an owner

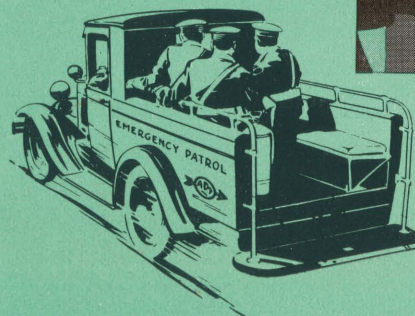

or trusted employee is forced to open a door after closing time—an alarm is transmitted immediately over private wires to an A.D.T. Central Station.

The instant the alarm is received, A.D.T. guards are dispatched and the police are notified of the attack.

BURGLAR ALARM SERVICE OPERATES

A.D.T. GETS THE ALARM

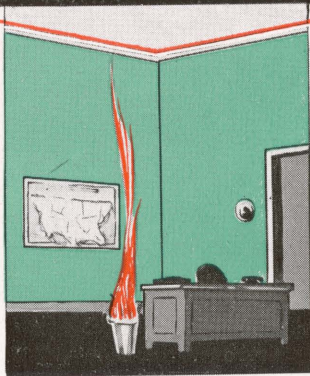

On their way!

AERO "feels" fire like your finger feels a flame

AERO

AUTOMATIC FIRE ALARM

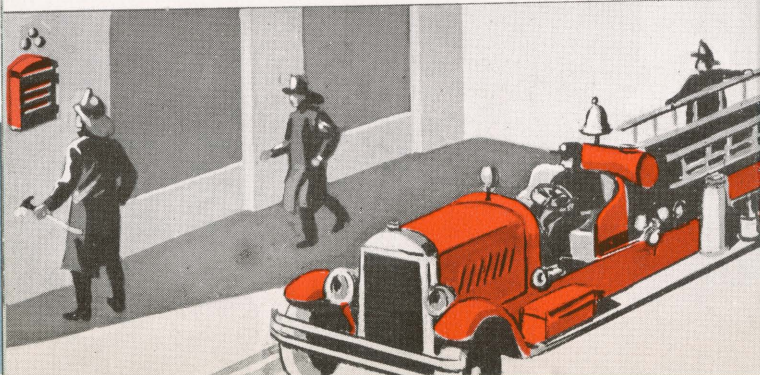

AT the first breath of flame, the AERO System transmits signals by direct private wire to the A.D.T. Central Station, where experienced

operators are on duty constantly: The fire department is dispatched upon receipt of fire alarms and, at the same time, our operators notify the owners or those in charge: A.D.T. guards are sent to the premises to render assistance.

One of the features of the AERO System is the annunciator placed at the main entrance of a large building to indicate the section of the building where the fire is.

The System is under the constant supervision and care of the Central Station and its personnel. All equipment is maintained by the A.D.T.

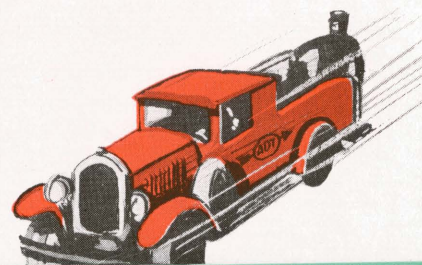

PROTECTION is furnished through A.D.T. Central Stations

A.D.T. SIGNAL OPERATORS

The fire detecting element of the Aero System consists of lengths of copper tubing, less than 1/12" in diameter, attached to the ceiling of the protected premises. The tubing is inconspicuous and adaptable to every type of building.

AERO Automatic Fire Alarm Service is the quickest and surest means of discovering and reporting fires. At the first breath of flame, the fire department is on the way and A.D.T. guards are dispatched to protect your interests.

A Watchman Supervised by A.D.T. is Never Alone

HOW **ADT**

ALL IS WELL

WHERE a watchman is employed, the A. D. T. Company supervises his performance throughout the entire period of duty.

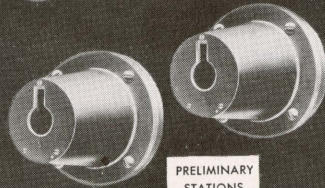

By means of special transmitting devices and private wires, the watchman reports to the Central Station, where a permanent record of the signals is made. If a watchman fails to signal within a few minutes of the time set for him to do so, an immediate investigation is conducted.

A. D. T. supervision of your watchman means added protection to your business and protection to the watchman himself. With A. D. T. supervision, your premises can never be left unprotected.

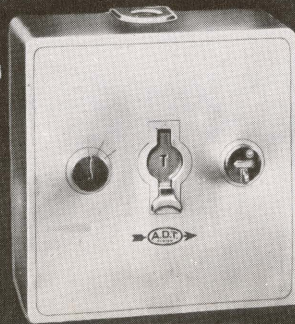

The watchman carries a special "key" or register which must be "set up," in a fixed sequence, in a series of preliminary stations, before he can signal the Central Station.

WATCHMAN'S REGISTER

PRELIMINARY STATIONS

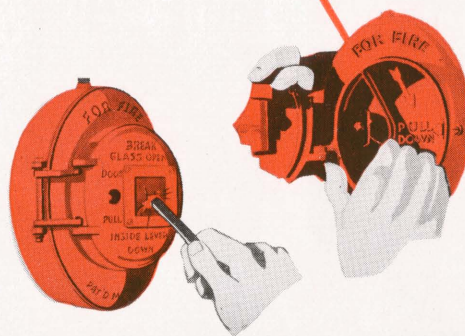

TRANSMITTING STATION

SUPERVISES NIGHT WATCHMEN

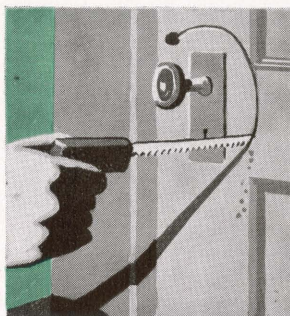

RECEIVING THE SIGNALS

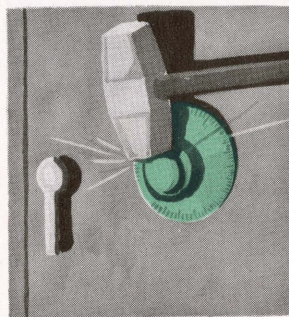

Fire Alarm boxes are installed in connection with Watchman's Supervisory Service. In case of fire, the fire department can be summoned from any part of the building without loss of valuable time.

The time to know your hazards is before it is too late!

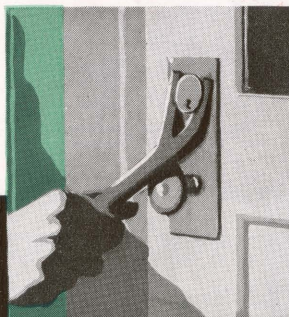

THE EASE OF BURGLARIZING YOUR PREMISES IS A TEMPTA- TION TO EVERY CRIMINAL . . .

Sawing out lock.

Knocking combination lock off safe.

Prying cylinder out of door lock.

Bending bars with automobile jack.

Holdup forcing owner to open own store.

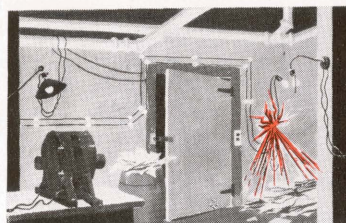

Pushing back bolt of spring lock.

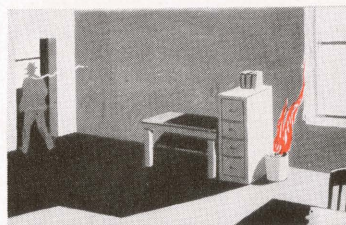

EVERY FIRE IS AN UNEXPECTED ONE!

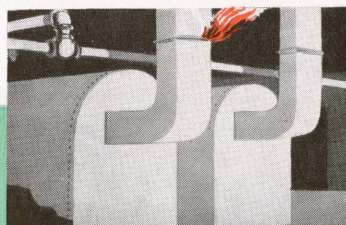

Spontaneous combustion.

Defective wiring is the cause of many fires.

Matches and smoking cause many fires

Defective chimneys and flues.

EVERYONE
dreads fire, but many
fail to protect them-
selves against the com-
mon and against the
unseen hazards that
are ever present . . .
Most large fires are the
result of DELAYED
ALARMS.

A SURVEY of your premises
will enable us to point out your
own Burglary and Fire hazards and
the benefits of A.D.T. Service
to YOU!
