# CENTURY OF PROGRESS

## 1933

HERALDING NEW COMFORTS THAT  
ADD TO HUMAN HAPPINESS AND PROMOTE  
THE WELL-BEING OF HUMAN LIVES

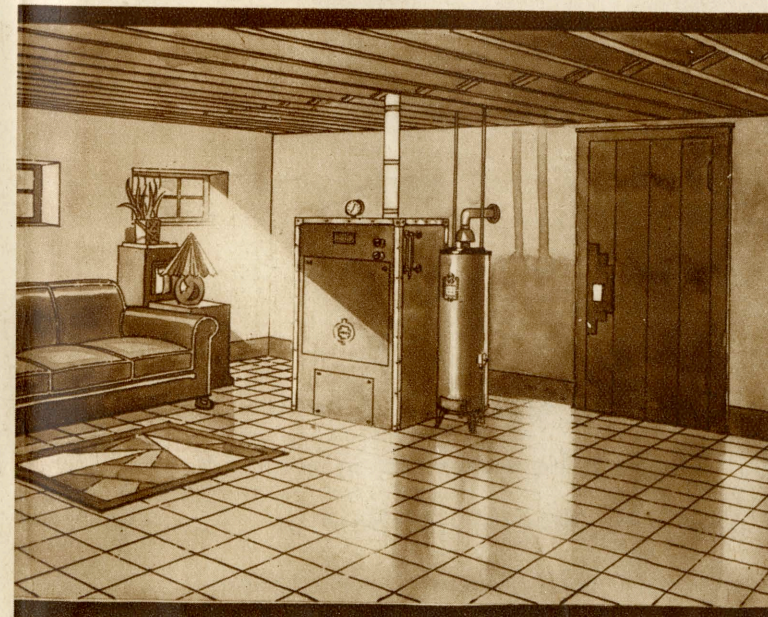

**C**OULD our forefathers of 100 years ago visit the great 1933 Century of Progress Exposition, how unbelievably changed the world would seem to them. With what astonishment would they gaze upon the things about us . . . And not the least part of their wonderment would spring from their contemplation of the modern developments in the fields of Sanitation, Heating and Ventilation. Bathtubs were not even manufactured 100 years ago; Radiator Heating did not exist, and Ventilation was an unborn science. It is only within the past fifty years or so that products in these spheres began to appear. Within these two generations, however, they have raised America's standard of living comfort to the highest peak of all time and contributed immeasurably to lengthening the span of human life . . . Now the 1933 Century of Progress heralds the advent of brand new products both in Sanitation and in what we may call the new science of Air Conditioning, which embraces not only the foundational elements of heating and ventilating, but also the elements of humidifying and dehumidifying, air cooling and air cleaning . . . And as these new products carry on in raising higher and higher America's standard of living, so we trust also that they will bring equal blessings at this most needful time in helping to restore to the nation the prosperity that is its heritage.
