her win The University of Chicago CHICAGO, ILLINOIS Office of the President March 7, 1924 My dear Mr. Goodspeed:

I should very much like to have the judgment of a committee of the faculty upon the course of action which the University ought to pursue in reference to music. I have in mind three matters of very varying magnitude, including the following:

- 1. Are the present arrangements for music at University exercises and in the University community satisfactory? If not, what changes are desirable?
- 2. Should the University anticipate the establishment of a School of Music within the next five or ten years? What should be the scope and general character of such a school?
- 3. In what respects should the plans of the University with regard to music affect the plans for the University Chapel which are now undergoing revision?

I am asking to serve on such Committee, Gerald

and E. J. Goodspeed. Mr. Smith will serve as convener, and the Committee will elect its own chairman.

Very truly yours,

Mr. E. J. Goodspeed Faculty Exchange

#### THE UNIVERSITY OF CHICAGO

Report of "Better Yet" Committee #2, On a Department or School of Music

The committee's duty was to assemble data and present recommendations with regard to the following question: Should the University of Chicago establish a School, or in default of that, a Department of Music?

certain so far as possible what existing opinion was in the University upon the subject; and second, to ascertain what provision for instruction in music has been made in other institutions whose conditions approximated those of the University of Chicago. On the basis of these investigations, the committee was to present its recommendations. In execution of its first task, the committee issued to the undergraduate body a number of questionnaires, of which a sample (Exhibit A) is appended, and collated the replies so obtained; in execution of the second, a study was made of the announcements of existing music schools and departments in other institutions of University or college rank, supplemented in certain cases by correspondence or personal interview.

I. Part I offers the results of the questionnaires, based on the total of replies made to the several questions, but leaving detail to the statistical appendix (Exhibit B). It thus gives a general view of undergraduate opinion as reflected in the replies.

2000 to 2500 questionnaires were issued, of which 227 were returned with information useful to the committee. Inasmuch as

#### THE UNIVERSITY OF CHICAGO

Report of "Better Yet" Committee #2, On a Department or Resident

The committee's duty was to assemble data and present recommendations with regard to the following question: Should the University of Chicago establish a School, or in default of that, a Department of Music?

The committee's work fell into two divisions: first, to ascertain so far as possible what existing opinion was in the University upon the subject; and second, to ascertain what provision
for instruction in music has been made in other institutions whose
conditions approximated those of the University of Chicago. On
the basis of these investigations, the committee was to present its
recommendations. In execution of its first task, the committee
issued to the undergraduate body a number of questionnaires, of
which a sample (Exhibit A) is appended, and collated the replies so
obtained; in execution of the second, a study was made of the announcements of existing music schools and departments in other
institutions of University or college rank, supplemented in certain
cases by correspondence or personal interview.

I. Part I offers the results of the questionnaires, based on the total of replies made to the several questions, but leaving detail to the statistical appendix (Exhibit B). It thus gives a general view of undergraduate opinion as reflected in the replies.

2000 to 2500 questionnaires were issued, of which 227 were returned with information useful to the committee. Insemuch as

the filling out and return of these questionnaires was entirely voluntary, the committee considers this number significant.

The following replies were made to the individual questions put:

To Question 1: 227 students expressed their interest in studying music at the University if suitable courses should be offered. Their interests were in the following lines--many of them checking five or six items:

- a) 152 were interested in courses in the appreciation of music
- b) 113 in the history of music
- c) 91 in harmony
- d) 52 in composition and counterpoint
- 5) 32 in orchestration
- f) 31 in the teaching of music in the public schools
- g) 70 in voice training
- h) 119 in instrumental training; of these 86 were interested in plano
  - 15 in violin
  - 13 in organ
  - 19 in eleven other instruments

certain tendencies appear from the above data: in the first place, the preponderant desire is for courses which offer such knowledge about music as could be acquired without either technical study or actual practice—that is, a desire for generally educational courses. Next in intensity is the desire for definite training, whether vocal or instrumental, the latter being almost twice as much in demand as the former. The more technical or

the filling out and return of these questionnaires was entirely veluntary, the committee considers this number significant.

The following replies were made to the individual questions put:

To Question 1: 227 students expressed their interest in studying music at the University if suitable courses should be offered. Their interests were in the following lines--many of them checking five or six items:

- a) 152 were interested in courses in the appreciation of music
  - b) 113 in the history of music
    - ol 91 in harmony
  - d) 52 in composition and counterpoint
    - 8) 32 in orchestration
  - aloodos oliday eds at claum to gaidoses eds at 18 (1
    - g) 70 in voice training
    - h) 119 in instrumental training; of these 86 were interested in plane
      - lb in violin
        - 13 in organ
      - 19 in eleven other instruments

Certain tendencies appear from the above data; in the first
place, the preponderant desire is for courses which offer such
knowledge about music as could be acquired without either technical
study or actual practice--that is, a desire for generally educational courses. Hext in intensity is the desire for definite
training, whether vocal or instrumental, the latter being almost
twice as much in demand as the former. The more technical or

professional courses are naturally less in demand, but may be expected to be coupled with courses in practical training.

To Question 2: 61 students were recorded as studying music concurrently with their University work--and some half-dozen stated that the latter had supplanted the former either at or since their entrance into the University. 8 were studying theory, 11 voice, and 49 instrumental music; of these last 36 were studying piano, 8 violin, 2 harp, 2 flute, 1 organ, and 3 various other instruments.

A very large proportion of the students who answered this question were also answering Question 1; the earnestness and self-denial of men and women who keep up both University work and private study is worthy of mention, inasmuch as the average student making a report of time and money devoted to music study recorded an expenditure of 8½ hours and \$4.75 weekly. It is evident that such persons would form the backbone of any group of serious music students which might be developed by courses given in the University.

The average weekly time spent on music by those recorded as studying it is allocated as follows: to lessons, I hour; to travel to and from lessons, I hours; to practice, 8 hours. It is noteworthy that on the average each student spent half as much time again in travel as in the lessons for which the travel is performed; it is easy to reckon the saving in time and money which would result from the institution of corresponding courses in the University.

professional courses are naturally less in demand, but may be expected to be coupled with courses in practical training.

To Question 2: 51 students were recorded as studying music concurrently with their University work--and some half-dozen stated that the latter had supplanted the former either at or since their entrance into the University. 8 were studying theory, 11 voice, and 49 instrumental music; of these last 36 were study-ing piano, 8 violin, 2 harp, 2 flute, 1 organ, and 3 various other ing piano, 8 violin, 2 harp, 2 flute, 1 organ, and 3 various other

A very large proportion of the students who snewered this question were also answering Question 1; the esthess and self-denial of men and wemen who keep up both University work and private sindy is worthy of mention, inasmuch as the average student making a report of time and money devoted to music study recorded an expenditure of 82 hours and \$4.75 weekly. It is evident that such persons would form the backbone of any group of serious music students which might be developed by courses given in the University.

The average weekly time spent on music by those recorded as studying it is allocated as follows: to lessons, I hour; to travel to and from lessons, I hours; to practice, 8 hours. It is noteworthy that on the average each student spent half as much time again in travel as in the lessons for which the travel is performed; it is easy to recken the saving in time and money which would result from the institution of corresponding courses in the University.

The grouping of data by classes brings out a significant point; there are nearly twice as many freshmen keeping up their training along with their University work as members of any other class. This preponderance is only partially offset by the fact that the freshman class is normally larger than any of the others; the evidence remains that an appreciable number of freshmen reach the University with enough interest in music for them to study it while carrying the normal load of University work. The fall in this number in the later years justifies the inference that these students are afterward obliged to relinquish a study which has commanded their loyalty and self-sacrifice, and which would with official recognition have definitely contributed to their education. It is equally legitimate to suppose that numerous eligible candidates for membership in the University are deterred from matriculation by the absence from the curriculum of courses in music.

Such comments as were made by students, beyond the replies to definite questions, indicated a lively desire on their part that courses in music should be established in the University; moreover the committee thinks it worthy of note that the courses desired by the greatest number of students are those which would contribute directly to the development of musical taste, intelligence and proficiency in individuals and in the University community.

II. The data gathered from announcements and similar sources not being susceptible of codification for the purposes of the Committee, its recommendations, based none the less on those data, are here

II. The data gathered from announcements and similar sources not being susceptible of codification for the purposes of the Committee, its recommendations, based none the less on those data, are here

presented:

- I. That a Department of Music be as soon as possible established in the University of Chicago in such a form that its expansion into a separate school could be effected with the least possible administrative dislocation.
- II. That the list of studies accepted by the University for admission to the Colleges be extended to include entrance credits in music, validated either by examination or by the successful completion of a specified course in the Department of Music.
- III. That such a number and variety of courses be offered in the Department as may make it possible for students to follow at least a major sequence in music.
- IV. That students be enabled either to take as electives any courses which they may be qualified to follow, or to make such combination of a major (or a minor) sequence in this Department with a sequence in another Department as has been customary in the Colleges.
- V. That the courses offered by the Department of Music be for the present designed in principle to give students
  - 1) Primarily such a wide and thorough acquaintance with music as a non-professional cultivated person should possess in any art.
  - 2) Secondarily the ability to use the voice or an instrument in such a way as to contribute to the non-professional
    student's sense of achievement and to his ability to give
    artistic pleasure to others.

#### A DEPARTMENT OF MUSIC

Hemorendum to the President of The University of Chicago

#### THE MEED

In 1924 a faculty committee headed by former Dean Ernest Hatch likins investigated student opinion concerning possible improvements and additions to the curriculum of the University of Chicago. In answer to a detailed questionnaire, 153 students asked for courses in appreciation of music, 113 for courses in the history of music, and 32 for such an advanced course as orchestration.

Dean Wilkins' committee recommended the immediate establishment of a music department to meet this situation. Since that time no further steps have been taken, but the recent campaign of the baily Marcon for such a department indicates that student opinion still asks for the addition of music to the curriculum. These Marcon articles were and have continued to be entirely of student inspiration.

The present departments of languages and literatures and the Department of Art cover the entire field of the arts, excepting music. A university along to offer a well-balanced education must here admit a deficiency, a deficiency especially important because it serves to emphasize that lack of balance for which this university is often criticized. The University of Chicago rejoices in its reputation for research standards. But an uncritical technology on research ends in a veneration of facts as sucheand an assumption, unhappily common, that the whole of life and reality can be affirmed or denied in words or chrases or formulae.

The incoming student has often had his intellectual alertness dulled by his high-school education. His diverse sensual contacts with the world about him have been pretty well nerrowed down -- so far as his formal education goes -to the reading eye. The narrowing process continues and intensifies in college unless the student finds some way, by instinct or by guidance, to balance the pursuit of the formula and the written word with those uses of the eye and ear concerned with sight and sound (not as symbols but) directly and for themselves. He is more likely to find, rather late in his scholestic career, that the one-sidedness of his formal training has left him almost deaf to a whole world of eural meaning; that it has taken little account of emotional expression, its sincerity, its discipline; it has had as little to say about the purposeful and concrete and disciplined use of his imagination; it has laid no stress on the very practical importance to him of that imagination. And we say that he is dried-up. I speak from personal experience with students ranging from the boy-choir ages to the college years.

Some measure of remedy of these defects is to be found in the proper teaching of certain music subjects. I have in mind various contrasts between the musical and the "general" in my own schooling.

# A DEPLACEMENT OF MUSIC

To President of mubaroment of the President of The University of Chicago

CHRM RET

In 1924 a faculty committee headed by former lean conservant Match "liking investigated student opinion concerning possible improvements and additions to the curriculum of the University of Chicago. In answer to a detailed questionneirs, 155 students asked for courses in appreciation of music, 115 for courses in the history of music, and 52 for such an advanced course as orchesits—tion.

Dean Wilking committee recommended the immediate establishment of a music department to meet this situation. Since that time no further steps have been taken, but the recent campaign of the laily Marcon for such a department indicates that student opinion etill sake for the adultion of music to the curriculum. These Marcon articles were and have continued to be entirely of student inspiration.

The present departments of languages and literatures and the chief present of the and the chief the chief

Some measure of remedy of these defects is to be found in the proper teaching of certain music subjects. I have in sind various confracts between the musical and the "general" in my own schooling.

# THE CHARACTER OF THE DEPARTMENT

The Department of Art of the University of Chicago might be taken as a model for the proposed Department of Music. But the teaching of music in the manner and on the scale which I have in mind involves questions of pedagogy which can be settled only by the practical classroom test. The salient feature of the department should be the acquaintance of the student with the materials, the history, and the literature of music. Altho credits in practical music may be admitted, the object of the department should be to acquaint the student with music as a social and cultural force, rather than to train professional musicians. The regulations of the department must take into account, however, that the most vital understanding of music is achieved thru personal participation in performance. The instruction recognized by the department must therefore be of two kinds, the practical and theoretical on one hand, and the historical and critical on the other.

Credit may be admitted for theoretical and practical study taken outside the University with accredited teachers. Theoretical and practical music may also be taught within the department itself, the scheduling of these courses following conventional models. The balance between credits allowed for the practical courses on the one hand, and the theoretical and cultural courses on the other, may follow the plan adopted by the Art Department.

The historical and cultural side of the subject should be presented upon a wider and more intensified scale than that prevailing in most other American universities.

In my opinion, the problem of the teaching of musical appreciation has not been adequately recognized. The material must be adjusted to the musical understanding of the student. This involves an arrangement of the material working, not from the old to the new in chronological order, but from the familiar idiom to the less familiar. This axiom, so commonly accepted in other pedagogical fields, has been recognized only fitfully in this.

One basic course in the materials of music should be made prerequisite to all other courses. This course would familiarize the student with the means of the production of sound and with the logic of musical theory. Following this should come the courses in musical history, including the analysis and frequent repetition of the representative works of the period studied. These courses should be arranged about the great figures and periods of musical history.

The material should not be presented solely by means of the customary reproducing instruments, but the services of competent artists should be secured for class-room performance. The performance of music by reproductive instruments is analogous to the presentation of photographs of paintings. Fully colored originals are also vitally necessary.

Reproduction is serviceable for necessary repetition, and for individual study, and the University would be serving scholarship by engaging itself in the issuance of records in certain important fields neglected by commercial recording companies.

Suggested Courses:

Materials of Music

Mastery of Choral Music (exceptional opportunity here for both illustration and participation)

Eistory of Opera Bech and Nandel Folk Song Bayda and Mosart Schubert, Schumenn, and Mendelssohn Brahms, Hahler, and Wolf Berlioz, Chopin, Franck The Russian Five and Tschaikovski Early Modernists: Strauss, Debussy Contemporary Composers.

The number and definition of these courses would naturally be determined in practice. The conventional theoretical courses, from elementary harmony to free composition and orchestration, should be evailable to qualified students.

The University has the opportunity in such a list of studies to parallel the standards of its other departments and to undertake research in important and neglected fields.

I believe that an effective minimum number of courses would be five in each quarter. The basic materials of music course, the pedagogical crux of the department, would engage the services of the entire personnel, and would be given over the three quarters of the academic year. Another three-quarter course would be the fundamental one in harmony and ear-training. The three other courses to make up the five would be selected from the historical-critical and the theoretical fields. Since the more advanced theoretical courses require a large amount of individual supervision, and consequently are of necessity more flexible, the number and character of such courses offered should be determined by student application. Certain courses of the department would be of the "100" character, others of the "200" character, while still others would confer graduate credit. Classes in the fundamental courses should be limited to 30 or less: the other classes should be still further limited, subject to the discretion of the instructor.

The importance of the Materials of Music course, from the standpoint of pedagogical research, is accented by the difficulties involved in conveying to the student a full appreciation of the meaning of "attention" as applied to music. Many texts have been written to guide the listener, some of them excellent in material, but these texts—and such classroom use of them as I happen to be familiar with—take too little care to see that the student not only listens but hears, and to provide his supervisor with means of ascertaining the quality of his attention. The need of this supervision arises not from intellectual problems, nor from questions of the student's good intentions, but rather from the fact that the average student has never been trained to listen to sound as such. He is required to exercise a derment faculty, and confronted with this new task, exhibits pleasure and dismay in varying proportions. The problem of what to do with the student at this stage is part of the job of every teacher of music. Good teachers solve it in their individual ways, but these ways need investigating and codifying.

#### Suggested Courses:

Materials of Music Maste (exceptional opportunity here for Mastery of Choral Music (exceptional opportunity here for both illustration and participation)

sgner Beethoven
History of Opera Beethoven
Folk Song Bayds and Handel
Schabert, Schumann, and Mendelssohn
brahms, Mahler, and Wolf
Berlies, Chopin, Franck
The Russian Five and Tschaikovski
Lariy Hodernists: Straues, Debusy
Contemporary Composers.

The number and definition of these courses would naturally be determined in practice. The conventional theoretical courses, from elementary harmony to free composition and ovenestration, should be available to qualified students.

The University has the opportunity in such a list of atualist to parallel the standards of its other departments and to undertake research in important and neglected fields.

mentuos le redmun meminim eviscelle na sais evelled I mould be five in each quarter. Good teachers agive it in their individual ways, but those ways need investigating and codifying.

Some estimate is appended of materials and staff needed.

# TIMERLINE

An early consideration of the project would afford the University the benefit of certain fortunate circumstances of the present time.

The director of the Chicago Symphony Orchestra has expressed keen interest in the matter, end would be glad to co-operate to the extent of arranging his Mandel Hall programs to illustrate some of the works under consideration in the music department.

Such musicions as Leo Somerby would be available for part of the personnel of the department. I am able to say confidentially that Healey Willan, Vice-Trincipal of the Teronto Conservatory of the University of Toronto, could be interested in heading such a department. He is a man of scholarly attainments, a musicion of the coverest standards, and a composer of international reputation. He has had considerable executive experience. And he's human.

It seems to be desirable to take advantage if possible of the interest engendered in things artistic by the Epstein gift. It has been interesting to note the common altho bistaken assumption on the part of the newspapers and the general public that the arts to be benefitted included music. It seems to be strategic to turn this assumption to account by outlining a plan agen which action might be based. I believe that there are persons of means in the community who might find an especial interest in just this venture.

I am given to understand that the first step in projects of this kind consists of the official sanctioning of the solicitation of monop. If such sanction were given and the solicitation begun I believe that Alfred Frankenstein, who has been of very material help in drafting this letter, could offer substantial assistance in an advisory capacity.

Some estimate is appended of materials and staff

#### TIMELIBRED

An early consideration of the project would efford the University the benefit of certain fortunate circumstances of the present time.

The director of the Chicago Symphony Orchestry has expressed been interest in the matter, and would be glad to ecoperate to the extent of arranging his Mandel Hall programs to illustrate some of the works under consideration in the music department.

Cash musiciens as ico Soverby would be avaiable for our of the personnel of the department. I am able to say confidentially that Healey Willan, Vice-Frincipal of the Toronto Conservatory of the University of Toronto, as and a scholarly attainments, a musician of the severest standards, and a composer of international reputation. He has hed considerable executive experience. And he's human.

It seems to me desirable to take advantage of the special of the interest engendered in things artistic by the Epstein gift. It has been interesting to note the common aithe mistaken assumption on the part of the ness-papers and the general public that the arts to be benefitted included music. It seems to me strategic to turn this assumption to account by outlining a pian upon which action alght be based. I believe that there are persons of means in the community who might find an especial interest in just this venture.

I am given to understand that the first step in projects of this kind consists of the official sanctioning of the solicitation of money. If such sanction were given and the solicitation begun I believe that Alfred Frankenstein, who has been of very material help in drafting this letter, could offer substantial assistance in an advisory capacity.

# STAFF AND EQUIPMENT SUCCESTED

An effective minimum staff of five full-time instructors, or the equivalent.

One full-time secretary.

I think it might be proposed to Dr. Willen that he come for an experimental period of two or three years at \$7500 a year.

A recital hall to seat 400 or 500.

Two large sound-proof classrooms.

Two smaller sound-proof classrooms.

office space

Library space, for records, piano roils, music, and books.

For recital hall: medium-sized pipe-organ, two pianos, one of them a reproducing piano, phonograph.

For small and large classrooms: reproducing pienes, phonographs, stereoptions.

Construction of rooms and phonographs should be under supervision of acoustical engineers.

After writing the above, I received a copy of an address given recently by John Erskine, on the subject of leadership in amateur music. Under a caption, "That can the colleges do?" he puts the case with his accustomed directness:

off with your plane and your singing. The American family is very generous in providing for the instruction of the arts for the young or kindergarten. ...you were started off with some elementary acting or painting, and the rest of your education, as you approached college or even get to high school, consisted in dropping out of the arts. The situation is far better in the schools than it is in the colleges. I speak of the colleges where it is absolutely abominable, with some few exceptions. But if a boy who doesn't intend to be in the profession, but merely wants to keep up his music, a boy who has the gift, goes to college, he will have to drop music. The college automatically kills it, because it will give him no credit for the three or four hours a day practice he must put in there. He can spend the time in the physical laboratory. And goodness knows, he will never be a physiciat when he gets through! But if he spends it on the best music teacher in the world, and even if we know he has a gift for music, the college will say, 'No, if you want the credit which comes with an A. B., which shows you are a cultured man, you will go to hear lectures, where you can get the names of the titles, but if you can play Beethoven, you are out."

You sight say, 'Our colleges have enough burdens already. You are asking tham to start a conservatory.' I am asking nothing of the kind. The conservatory shouldn't be in the college; there are plenty of reasons why they won't mix. But here is a simple thing: Any college that has vision, in any town I know in the United States, can say to any student that comes there and wents to keep up plane or the voice, 'You study so many hours a semester and practice so many hours a semester under an accredited teacher, and we will give you credit.' That will tie the odds in our educational system without a cent of expense to the college, and it would save for this country a total amount of talent--I won't say genius, but talent--which at present it is impossible to measure."

"I don't want to seem to exaggerate, but I speak with some bitterness about this, because I have seen so often, in over a quarter of a century of teaching in the American university, the boy who comes up in the freshman year-the ideal boy we talk about-or the girl who comes up in the college nearby, the ideal youngsters, with love of fine things, fond of good proper plessures of life, fond of music, too, and enjoying the making of beauty, and the college says to them, as though beauty didn't count, 'so, no credit for that. Do that outside if you can.' And they try to do it outside and creck under the strain. They haven't the physical strength to do it--- (Soon) they will not be able to play, probably. They will have dropped their music with a dreadful thud, which unfortunately is the characteristic sound of our cultural life-....Though I am myself a book man, a writer of books and so on, I insist we put the emphasis too far on the listening to lectures, going to recitations, and reading books, many of them books about books, not very important at that."

Some recent student reactions to the campus dearth:

After writing the above, I received a copy of an address given recently by John Brakine, on the subject of leadership in amateur music. Under a caption, "chat can the colleges do?" he puts the case with his accustomed directness:

".. you can remember when.... the family started you are with your plane and your singing. The american family les with your plane and your singing for the instruction of the area at your for the young or kindergartem. ...you were started and the following or painting, and the rost of your education, as you approached coilege or even got to high school, consisted in dropping out of the arts. The situation is far the object in the schools that is far the coileges where it is an the coileges. I speak of the coileges where it is absolutely abominable, with some few profession, but merely wants to keep up his music, and the fift, goes to coilege, he will have to drop music. The coilege sutematically kills it, because it will give him has the fift, goes to coilege, he will have to drop music. The coilege sutematically kills it, because it will give him and you are the three or four hours a day practice he music and goodness knows, he will never be a physiciat when he gets through it sut if he spends it on the post music, the college through the case it on the best music the coilege through the has a gift for music, the college through when shows you are a cultured man, you will so, if you want the credit which shows you are a cultured man, you are out."

You are asking them to start a conservatory. I am asking nothing of the kind. The conservatory shouldn't be in the nothing of the kind. The conservatory shouldn't be in the college; there are plenty of reasons why they son't mix. But here is a simple thing: Any college that has vision, is any town I know in the United States, can say to any student that the comes there and wents to keep up plane or the voice, 'You study ac many hours a semester and practice so many hours a semester under an accredited teacher, and we will give you credit.' That will the the odds in our educational system without a country a total amount of talent--I won't say genius, but country a total amount of talent--I won't say genius, but talent--which at present it is impossible to messure."

a nevo at seeze I but esem to exaggered to the most of the a revo at a some of the seen so often, the other, and this, because I have seen so often, the other, and the freeham is the American university. The quarter of a cemes up in the freeham year-the ideal boy we take the girl whe comes up in the comes up in the college nearby, the ideal seet should be good proper place of the good proper place. The good proper place of the setting the making the making of some the college says to there, and the object of the setting the making the setting the college says to the the substitution of the college says to the college the setting they and they try to do it obtains and they try to do it outside and creak ander the strain. They will have dropped their music with a dreadful thud, which unfortunately is the charactermant of the sound of our cultural life.....Though I am myself a book and reading books, many of them books to recitation at the instend to the college and too far on the listening to lectures, going to recitations, and reading books, many of them books about books, not very

An orchestra of students, of rather surprising numbers and ability, gathered itself together last year. After a great deal of work in starting the organization and in beginning rehearsals, it disbanded for lack of leadership and rehearsal rooms.

A number of the Choir asked me some time ago if I'd help them select and rehearse madrigals "just for the fun of it." The idea was entirely theirs and a complete surprise to me. They're singing well enough to risk appearing at one of the meetings of the Mational Conference of Music Supervisors in March: but better yet, they're having the fun they were looking for.

A number of other students asked for my help with their opera Study Club formed before the opera season. I had to decline for lack of time, and so far as I know they have had no official or professional help, but they have continued to survive and function in spite of the handleaps of smateur experimentation.

An illustration of Mr. Mrskine's last paragraph:

A senior girl, one of this year's aides, I am given to understand, wanted to play a plano concerto in the American Conservatory contest. In order to do it she had to give up campus classes and activities and take her work in the down-town classes.

From the 1924 report:

The grouping of data by classes brings out a significant point, that there are nearly twice as many freshmen who are keeping up their musical training along with their university work, as there are members of any other class. This preponderance is only partially offset by the fact that the freshmen class is normally larger than any of the others."

"The grouping of data by classes brings out a significant point, that there are nearly twice as many freshmen who are keeping up their musical training along with their university work, as there are members of any other class. This preponderance is only partially offset by the fact that the freshmen class is normally larger than any of the othere."

The University of Chicago Office of the Organist and Director of Choirs March 9:1924, Dear President Burton; The demands connected with my general duties as organist and director of the Sunday and daily lehapel Choirs, also other duties as board meetings etc., bring to me a færsonal problem. If I should have your favor in appointment as organist and director of music for 1924-25, could the salary be a little increased? In my fresent balance of expense and income, my emergency makes every dollar count. I have enjoyed the make more this year, with bean Willen's and the imforored bhafel plans, those any since 1911, and want to give the time for the fullest efficiency. The Smith of the y. m. b. a. has just asked that I give a choral Vester in april. This I am glad to do, although it takes much time and thought. It illustrates the by-froducts of my duties. Jours faithfully towns,

The Britishey sond their ways to thought who the love in shiptening to viginist and director

President E.D. Burton Harper Library

Dear President Burton:

I am sending you herewith a copy of the report of the "Better Yet" Committee on Music, which has recently come to me.

I am sending a report also to Mr. Field, as Chairman of your own committee on the same subject.

I hope you will find time to look over the present report, which seems to me an admirable and very instructive document.

It is my custom, after a "Better Yet" report has come in to me, to state the fact in the Maroon, giving them a copy of part or all of the report, and stating also what disposition I am making of the report.

Would it be proper for me in this case to state that I had referred the report to an official University committee on the same subject, recently appointed by you?

Very truly yours,

Ernest H. Wilkins

Report of "Better Yet" Committee #2, On a Department or School of Music

The committee's duty was to assemble data and present recommendations with regard to the following question: Should the University of Chicago establish a School, or in default of that, a Department of Music?

The committee's work fell into two divisions: first, to ascertain so far as possible what existing opinion was in the University upon the subject; and second, to ascertain what provision for instruction in music has been made in other institutions whose conditions approximated those of the University of Chicago. On the basis of these investigations, the committee was to present its recommendations. In execution of its first task, the committee issued to the undergraduate body a number of questionnaires, of which a sample (Exhibit A) is appended, and collated the replies so obtained; in execution of the second, a study was made of the announcements of existing music schools and departments in other institutions of University or college rank, supplemented in certain cases by correspondence or personal interview.

I. Part I offers the results of the questionnaires, based on the total of replies made to the several questions, but leaving detail to the statistical appendix (Exhibit B). It thus gives a general view of undergraduate opinion as reflected in the replies.

2000 to 2500 questionnaires were issued, of which 227 were returned with information useful to the committee. Inasmuch as

Report of "Better Yet" Committee #2, On a Department or Report of Music

The committee's duty was to assemble data and present recommendations with regard to the following question: Should the University of Chicago establish a School, or in default of that, a Department of Music?

The committee's work fell into two divisions: first, to ascertain so far as possible what existing opinion was in the University upon the subject; and second, to ascertain what provision for instruction in music has been made in other institutions whose conditions approximated those of the University of Chicago. On the Dasis of these investigations, the committee was to present its recommendations. In execution of its first task, the committee which a sample (Exhibit A) is appended, and collated the replies accordined; in execution of the second, a study was made of the approuncements of existing music schools and departments in other cases by correspondence or personal interview.

I. Part I offers the results of the questionnaires, based on the total of replies made to the several questions, but leaving detail to the statistical appendix (Exhibit B). It thus gives a general view of undergraduate opinion as reflected in the replies.

2000 to 2500 questionnaires were issued, of which 227 were returned with information useful to the committee. Insamuch as

the filling out and return of these questionnaires was entirely voluntary, the committee considers this number significant.

The following replies were made to the individual questions put:

To Question 1: 227 students expressed their interest in studying music at the University if suitable courses should be offered. Their interests were in the following lines--many of them checking five or six items:

- a) 152 were interested in courses in the appreciation of music
- b) 113 in the history of music
- cl 91 in harmony
- d) 52 in composition and counterpoint
- al 32 in orchestration
- f) 31 in the teaching of music in the public schools
- g) 70 in voice training
- h) 119 in instrumental training; of these 86 were interested in piano
  - 15 in violin
  - 13 in organ
  - 19 in eleven other instruments

Certain tendencies appear from the above data: in the first place, the preponderant desire is for courses which offer such knowledge about music as could be acquired without either technical study or actual practice—that is, a desire for generally educational courses. Next in intensity is the desire for definite training, whether vocal or instrumental, the latter being almost twice as much in demand as the former. The more technical or

the filling out and return of these questionnaires was entirely voluntary, the committee considers this number significant.

The following replies were made to the individual questions ut:

To Question 1: 227 students expressed their interest in studying music at the University if suitable courses should be offered. Their interests were in the following lines--many of them checking five or six items:

- olaum to noitstoerque edt ni searuoo ni betseretni erew 231 (s
  - b) 113 in the history of music
    - al 91 in harmony
  - thiographuoo bas noillsoqmoo al 23 16
    - el 32 in orchestration
  - fl 31 in the teaching of music in the public schools
    - galaisat solov al OT (s
    - as end to igniniari latemental in ell in
      - 86 were interested in plano
        - nifolv at at
          - 13 to orean
      - ajnemurjani redjo nevele ni el

Gertein tendencies appear from the above data: in the first
place, the preponderant desire is for courses which offer such
knowledge about music as could be acquired without either technical
study or actual practice--that is, a desire for generally educational courses. Next in intensity is the desire for definite
training, whether vocal or instrumental, the latter being almost
twice as much in demand as the former. The more technical or

professional courses are naturally less in demand, but may be expected to be coupled with courses in practical training.

To Question 2: 61 students were recorded as studying music concurrently with their University work--and some half-dozen stated that the latter had supplanted the former either at or since their entrance into the University. 8 were studying theory, 11 voice, and 49 instrumental music; of these last 36 were studying piano, 8 violin, 2 harp, 2 flute, 1 organ, and 3 various other instruments.

A very large proportion of the students who answered this question were also answering Question 1; the earnestness and self-denial of men and women who keep up both University work and private study is worthy of mention, inasmuch as the average student making a report of time and money devoted to music study recorded an expenditure of  $8\frac{1}{2}$  hours and \$4.75 weekly. It is evident that such persons would form the backbone of any group of serious music students which might be developed by courses given in the University.

The average weekly time spent on music by those recorded as studying it is allocated as follows: to lessons, 1 hour; to travel to and from lessons,  $1\frac{1}{2}$  hours; to practice,  $8\frac{1}{2}$  hours. It is noteworthy that on the average each student spent half as much time again in travel as in the lessons for which the travel is performed; it is easy to reckon the saving in time and money which would result from the institution of corresponding courses in the University.

professional courses are naturally less in demand, but may be expected to be coupled with courses in practical training.

To Question 2: 61 students were recorded as studying music doncurrently with their University work-and some half-dozen stated that the latter had supplanted the former either at or since their entrance into the University. 8 were studying theory, 11 voice, and 49 instrumental music; of these last 36 were studying ing piano, 8 violin, 2 harp, 2 flute, 1 organ, and 3 various other instruments.

A very large proportion of the students who answered this question were also answering Question 1; the earnestness and self-denial of men and women who keep up both University work and private study is worthy of mention, insamuch as the average student making a report of time and money devoted to music study recorded an expenditure of 8th hours and \$4.75 weekly. It is evident that such persons would form the backbone of any group of serious music students which might be developed by courses given in the University.

The average weekly time spent on music by those recorded as studying it is allocated as follows: to lessons, 1 hour; to travel to and from lessons, 12 hours; to practice, 82 hours. It is noteworthy that on the average each student spent half as much time again in travel as in the lessons for which the travel is performed; it is easy to reckon the saving in time and money which would result from the institution of corresponding courses in the University.

The grouping of data by classes brings out a significant point: there are nearly twice as many freshmen keeping up their training along with their University work as members of any other class. This preponderance is only partially offset by the fact that the freshman class is normally larger than any of the others; the evidence remains that an appreciable number of freshmen reach the University with enough interest in music for them to study it while carrying the normal load of University work. The fall in this number in the later years justifies the inference that these students are afterward obliged to relinquish a study which has commanded their loyalty and self-sacrifice, and which would with official recognition have definitely contributed to their education. It is equally legitimate to suppose that numerous eligible candidates for membership in the University are deterred from matriculation by the absence from the curriculum of courses in music.

Such comments as were made by students, beyond the replies to definite questions, indicated a lively desire on their part that courses in music should be established in the University; moreover the committee thinks it worthy of note that the courses desired by the greatest number of students are those which would contribute directly to the development of musical taste, intelligence and proficiency in individuals and in the University community.

II. The data gathered from announcements and similar sources not being susceptible of codification for the purposes of the Committee, its recommendations, based none the less on those data, are here

The grouping of data by classes hryage fold a significent point; there are nearly twice as many freshmen keeping up their training slong with their University work as members of any other class. If, the data gathered from announcements and similar sources not being susceptible of codification for the purposes of the Committee, its recommendations, based none the less on those data, are here

## presented:

- I. That a Department of Music be as soon as possible established in the University of Chicago in such a form that its expansion into a separate school could be effected with the least possible administrative dislocation.
- II. That the list of studies accepted by the University for admission to the Colleges be extended to include entrance credits in music, validated either by examination or by the successful completion of a specified course in the Department of Music.
- III. That such a number and variety of courses be offered in the Department as may make it possible for students to follow at least a major sequence in music.
- IV. That students be enabled either to take as electives any courses which they may be qualified to follow, or to make such combination of a major (or a minor) sequence in this Department with a sequence in another Department as has been customary in the Colleges.
- V. That the courses offered by the Department of Music be for the present designed in principle to give students
  - 1) Primarily such a wide and thorough acquaintance with music as a non-professional cultivated person should possess in any art.
  - 2) Secondarily the ability to use the voice or an instrument in such a way as to contribute to the non-professional student's sense of achievement and to his ability to give artistic pleasure to others.

muser 6 14 The University of Chicago Department of Political Economy Koesaler November 19, 1924 Dear Mr. Burton: May I suggest the addition of Dr. Karl K. Koessler to the committee which you appointed last spring to out line plans for the development of music at the University? Nominally Dr. Koessler might be appointed to the vacancy created by the resignation of Professor Robertson. I am proposing his name, however, not to maintain our original number, but because Dr. Koessler would be in my judgment a most useful member of the committee. His knowledge of music and his acquaintance with musicians are, I fancy, hardly equaled within the ranks of the faculty. I have, as a matter of fact, been drawing largely on his time and good nature in the course of interviews and inquiries I have been conducting in connection with the committee's work. If this suggestion meets with your approval, I should be glad if a letter could be sent from your office, informing Dr. Koessler of his appointment. Dr. Koessler has a little of the sensitiveness to form and ceremony which one meets in Europeans. I suspect he might feel a little less assured of his status if the notification were left to me. I have hopes that the committee may be able to report shortly a preliminary outline, at least, of its recommendations. Sincerely yours, James Q. Bld President Burton University of Chicago JAF/EW

The University of Chicago Dear Mr. Burton: May I suggest the addition of Ir. Harl E. Rossaler Womanar of to because might be appointed to the vacancy orested by the resignation of Professor Mebertheon. I am Australia of blow related Tr.
